Global Security Tracking Inc. Offender Monitoring Solutions

After being announced during CES 2008, shown later on CeBIT 2009 in Hanover, and covered in press this long-awaited Global Security S-911 AGPS Bracelet-type cousin of the popular Global Security Bracelet is finally coming to the U.S.A. It's RTM time has been delayed a couple of times from Q3 2009 to Q1 2010 and GPS Connect is planning on starting to offer Global Security S-911 Bracelet AGPS to customers later in February.

ABOUT US

Global Security Tracking, Inc. is one of the world leading providers of solutions for Telematics, Telemetry, GPS and Vehicle & Personal Location products.

We design and produce our products in China. Our hardware & software solutions allow customers to improve productivity by enabling the effective management of their vehicles, mobile workers, assets, goods and services. We also provide the best electronic solution for personal safety and homeland security.

We have a highly experienced R&D team with many years of RF wireless and GPS knowledge to customize winning products from concept to production within a short period of time. GST has the following close industrial partners in the development of new products: Intel, Freescale, Microchip, Wavecom, Maxim and Siemens.

Our Vision

To be a world technology leader in providing innovative solutions to improve the quality and safety of human life.

Our Mission

Global Security Tracking, Inc. is dedicated to enhancing the value of your employees, drivers and your fleet by providing real-time data communication, Global Positioning System Tracking and Fleet Management tools that increase revenue, productivity, communication and drive down the total cost of fleet ownership. Along with the latest telematics technology we create innovative solutions to make our community a safer place, bringing solutions to social areas for the elderly, handicapped, child security or parole systems.

Commitment to Quality

Global Security Tracking, Inc. maintains the highest levels of quality in all processes that our activity involves. Through our strategic partners for manufacturing we use state of the art manufacturing technology and ISO/QS quality systems, to provide a full range of capabilities designed to meet the outsourcing needs of the electronics Original Equipment Manufacturers and Electronic Contract Manufacturers. The commitment to quality is one of the most important points in our company's policies, from sales leads to after sales customer satisfaction.

Our Technology

Since availability of GPS satellite data for commercial applications, the IT industry

has developed a wide use of technology for asset location. Under this new dimension, many additional management capabilities become available. This includes monitoring and control of fleets, people or almost any mobile asset. Our installations work with powerful dedicated servers and T1 Internet connections allowing a fast way to assist all our customers as well as develop innovative solutions worldwide.

Which IT areas have we developed to accomplish our goals?

Global Security Tracking, Inc. offers Turnkey Solutions for AVL (Automated Vehicle Location) Project Since availability of GPS satellite data for commercial applications the IT industry has developed a wide spread of technology for asset location. Under this new dimension, many additional management capabilities become available. This includes monitoring and control of fleets, people or almost any mobile asset.

- Telematics
- AVL/GPS
- Wireless
- RF Networks
- Telecommunications Hardware
- IT Hardware
- Network Security
- Web Software
- Network Software
- Embedded System Software
- RFI

To ensure successful operation and maintenance, a basic system plan is created; the system's configuration is developed; I/O database is collected; control logic diagrams are prepared; and an automation system is examined with dynamic simulation study. Such well-integrated engineering efforts lead to the development of information and control systems that are secure and advantageous Global Security Tracking Inc. offers turn-key solution services including provision of remote units, central equipment with special software to translate GPS data on digitized maps, settling of network structures, training courses onsite and tech support for your projects Several media options are offered to transmit the information to and from the vehicle mounted equipment to the management center, where AGPS, GSM, GPRS, CDMA as cellular networks could be used, UHF/ VHF in radio systems and even satellite communications where no other radio coverage is available.

Global Security Tracking was able to make this happen with the expertise of our consultant Mr. Michael Lajoie from Homeland Security.

DIRECTOR OF SECURITY

Department of Corrections, As the Director of Security his responsibilities included ensuring the safety and security of the Department and to oversee Investigations and Forensic Computer Investigations, Security Risk Groups, Special Intelligence and Telephone Monitoring Units. These specialized units contribute to enhance the internal safety and security of the Department and its staff. Moreover, to assign specialized staff to statewide Law Enforcement Task Forces and Serve as the Department's liaison to the Connecticut Homeland Security's Intelligence Center's Policy Board, liaison to the FBI's

Joint Terrorism Task Force, and as the Department's Prison Rape Elimination Act (PREA) coordinator. Attorney General's office, drafted post orders, unit directives and inmate handbooks, conducted investigations and research for lawsuits concerning inmates and staff, assisted in cadet training, represented the Department of Correction education department, acted as disciplinary investigator, and provided professional testimony for DOC practice.

Global Security Tracking Inc (GST) Using the Expertise as Investigators for International Intelligence and Partners with Expert Researcher, Software Instruments and Computer Forensic Manager at MIT.

Global Security Tracking continues to seek out the best product and software tracking solutions to insure success in the constantly changing technology sector of the GPS solutions. With experience spanning more than 30 years in covert operations and business management, Mr. Scott Robidoux V.P and the management team are able to meet the constant ever-changing demands of the Security industry.

Using the expertise of investigators from International Intelligence and partners with an expert researcher and computer forensic manager at MIT, GST has sought out the best product, software tracking solutions to insure success in the constantly changing technology sector of the GPS solutions.

GST are experts in the tracking field and is recognized as leaders in the Global Positioning Systems Technology Solutions, ensuring durability and reliability for all the products we offer.

We also choose to work with a premier software and system, 3D mapping integration and partner in the mobile asset management and vehicle tracking field to develop our tracking software and our wireless network company Verizon / AT&T and Vodafone is provided by the number 1 one consolidator in North America, making it possible to extend the functionality of Global Security Tracking beyond the capability of any single network provider in and around the world tracking

We provide a complete system (hardware, mapping and software). No outsourcing or second or third parties. Our GPS tracking can be used for fleet monitoring, teenage driving safety, law enforcement, stolen vehicles, recovery and infidelity.

Why do you need GPS tracking?

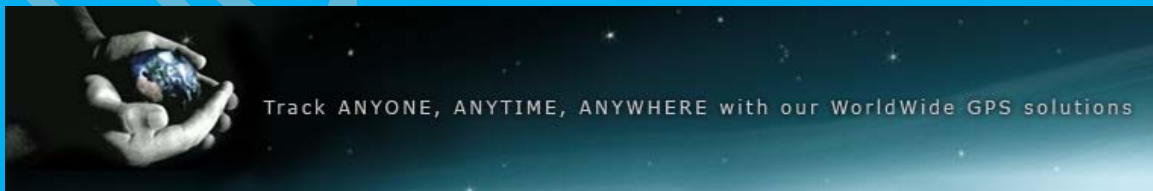

In major metropolitan areas, as well as smaller communities nationwide, gang activity continues to increase. Recent estimates from the U.S. Department of Justice indicate there are approximately 785,000 gang members and 26,500 gangs active in the United States. Gangs are responsible for a variety of crimes including aggravated assault, robbery, auto theft, and drug dealing and because of the high rate of recidivism among gang members; incarceration is only a temporary fix.

Law enforcement agencies have found an extremely effective tool for gang control in GPS and assisted GPS electronic monitoring solutions. Only {GST} provides a tracking solution that leverages dual GPS and cellular tracking to provide law enforcement agencies with visibility into an offender's location.

Through the Global Security Tracking electronic monitoring solution, agencies can help ensure that gang members stay away from areas where gangs tend to congregate. Location data captured from the device can be correlated with schedules, zones and other parameters maintained in the Global Security Tracking application to help ensure compliance with court ordered sentences.

Authorized users can leverage the system to create mobile exclusion zones around gang members wearing the Global Security Tracking device. If the gang member enters a specific zone or approaches an area frequented by known gang members, the system automatically alerts the appropriate monitoring officers to respond.

Global Security Tracking provides the ideal electronic tracking solution.

Here's how the Global Security S-911 Bracelet works: Active GPS and assisted GPS tracking providing indoor and outdoor tracking

THE SERVICE

24/7 monitoring center staffed with [GST] Certified Professionals

Remote diagnostics

- Ongoing technical support {GST} SOS Emergency button to call 911 or designated phone number for 2 way voice communications. Notification to the control center thru SMS/GPRS and email.
- Encryption with 128 bit to secure the private communication data link.
- Tamper detection for opening the case.
- Smart Card chip built in to provide the security key for parole system applications.
- Event History
- Group Monitoring
- Emergency Email
- GeoFences (alarms)
- Breadcrumbs
- Logistic Reporting
- Multi-language support for menu selection.
- Micro USB port for configuration, power charging and also output GPS NMEA sentences.
- Individual Geo-Fence capability within / without of the Geo-Fence alert.
- 3 Axial Motion G Sensor to report impact, accident, crash, tamper intent and falling.
- Temperature sensor built in for reporting.
- Real time dynamic position report based on time interval or distance traveled.
- Mileage report and over-speed alert.
- Phonebook and fast dial feature.
- RF ID application ready.
- Worldwide GSM/GPRS Quad-band 850/900/1800/1900MHz.
- Display time, date, speed, and GPS data.
- SiRF III AGPS for indoor location.
- LCD Screen with backlight.
- Bluetooth compatible for wireless headset.
- Built in SPK, MIC and vibration motor.
- 2 phone buttons on the side (green and red).
- Detailed documentation for system use in gang control (GST S-911) is a real time wrist wearable tracking device by using the

**GSM/GPRS/AGPS network with high sensitivity GPS receiver built in.
The suitable applications as following:**

- Law enforcement
- Parole & Offender monitoring
- Healthcare assistance monitoring
- Sales & Logistic management
- Elderly Care monitoring
- Panic alert and real time medical assistance
- Security guards dispatching Alzheimer's patients care *and more...*

GLOBAL SECURITY S-911 BRACELET

THE MOST ADVANCE TRACKING DEVICE IN THE WORLD PERIOD!!

Three main features of the Global Security S-911 Bracelet AGPS that are compact size (watch style), superior GPS capabilities and quad-band GSM connectivity, makes it an ideal companion for kids, whose parents are concerned about their safety, people with Alzheimer's and other forms of dementia, and a useful tool for professional security companies (i.e. VIP security or law enforcement). Whether it is world class air craft racing, i.e. Race of Champions, canoeing, cycling, and mountain biking or running. VirtualSpectator.co.za continues to innovate and give spectators unprecedented live information when you need it most. (GST S-911) Global Security Tracking Inc uses state of the art technology to provide relevant and accurate information to spectators and commentators alike. Spectators have the option to SMS or login to the virtual spectator web site to get relevant updates on any of the competitors.

(GST) introduces high definition graphical representation to view participant's progress in sporting events live. Virtual Spectator is a functional rich service site that brings a unique service to all sports enthusiast and recreational sports man and woman. This service combined with graphics, scoreboards and online web application assure sports fans complete immersion into favorite sports events.

Comparing to its handheld ancestor (GST S-911) the new Global Security S-911 Bracelet AGPS despite of its smaller size does not become less useful. It's once again a 3-in-1 gadget - a digital watch, a GPS location tracker and an emergency cell phone. Plus it is promised to have some new and very useful features. Its detailed specifications are not available yet but what we already know is the Global Security S-911 Bracelet AGPS will be waterproof, support encryption, and prevent tampering by signaling unauthorized bracelet removal.

Its flexible band is designed to allow multiple applications: wearing on wrist or ankle, or attached to a pet collar.

We'll be writing more about Global Security S-911 Bracelet AGPS as soon as more information becomes available so stay tuned. Global Security Tracker S-911 Bracelet

- AGPS
- Quad Band Phone
- Time, Date & Speed
- SOS Alert
- Encryption
- Waterproof
- Bluetooth Friendly Shock & Temperature Sensor GLOBAL SECURITY S-911 BRACELET

The most advanced and portable personal locator available.

Provides a complete protection alert environment anywhere in the world.

The Global Security Tracking S-911 Bracelet is a mini portable wrist wearable security device with ultra high sensitivity GPS and cell phone components for applications such as: child protection, anti-kidnapping, personal safety, law enforcement, parole system, asset monitoring, logistic control, elderly watch, health care, animal control and VIP protection.

It is now easier than ever to protect your loved ones.

- Performance
- High Quality - The (GST S-911) is manufactured using the latest technologies conforming to the strict ISO & QS standards.
- Compact Size - The (GST S-911) is light weight and compact for easy wearing, suitable for all of life's challenges.
- GPS with Indoor Capability - Built-in high sensitivity GPS receiver with ultra high accuracy for indoor activity.
- One Model Fits All - The (GST S-911) is stylish and multi-functioned for everyday use, and yet rugged enough to keep up with your greatest adventures.
- Strength and Durability- The waterproof and shock resistant case provides a sealed compartment design for use in rough environments.

Global Security Location Service

Global Security Tracking Inc. offers a complete internet location based service enabling customers to track and locate their devices through GST's web portal. Customers can enable bread crumbs on the mapping pages to permit activity tracing and then save to a reporting feature for daily/weekly/monthly logistics.

Teen Tracking (example of (GST S-911) usefulness)

Global Security Tracking is looking out for the safety of your kids these days. All have very busy schedules with many commitments. This can make a parent want to

pull out their hair when trying to keep track of their teen. You want to know where they are at all times so you know that they are safe, but as a parent how do you do that? You certainly can't follow them around every minute of the day. How will you know if your child is in trouble or needs help of some sort?

Most teens do have cell phones and these are great ways to keep in touch with them and they also give your child a way to contact you if trouble arises. What happens though if they don't have the cell phone with them or the battery dies? One really good solution is GPS tracking for your teen's auto. I know most teens may not like having GPS in their car, but there are two very good reasons that you, as a parent, will want to install a GPS device in your teen's car. The first and most important reason is to ensure your child's safety and the second is in case of a theft of the vehicle. Most teens do not have the experience to be able to accurately decide if a situation is dangerous or not. Many times they find themselves in danger or trouble because of this lack of experience.

Of course as a parent you are much more aware of the dangers out there in the world, but getting a teenager to listen to you is mostly next to impossible. So you do the best you can and mostly end up sitting at home worrying about your teen and their safety. If you've installed GPS tracking in your teen's car your need to worry is much less because you can always know where they are. Not only will you know where they are, but you can probably get a good idea of who they're with as well. And if they don't arrive home when they should you'll have no problem contacting the authorities and letting them know exactly where they can find your teen's car and most likely your teen as well. This can often save them from harm and all kinds of trouble.

By installing a GPS tracking device in your teen's car you can ensure their safety and your peace of mind. You'll be able to relax when they are out knowing that you can find them in minutes with the GPS that is in their car. I know you shouldn't want or need to spy on your kids, but in the event of some type of emergency you'll be so glad that you've cared enough to keep track of them this way. GPS tracking can be a lifesaver.

Service & Support

Global Security Tracking partners with our worldwide customer base to ensure that their tracking networks and devices are strategically supported and implemented. We understand that our customers' require special attention and as such, it is our goal to be the provider of choice for the world's leading tracking devices.

Support programs to suit your needs

Global Security Tracking provides a comprehensive suite of service and support programs, including 24 x 7 x 365 live accessibility to technical support resources. With each customer requiring a specific set of support needs, Global Security Tracking offers different levels of customer service programs as well as emergency

on-site service which is designed to provide customers with services needed to ensure problems are resolved as soon as possible and high-availability tracking is always available.
